JS Documentation

Members

[showInvalidRecordType](#)

Check if record type is invalid

[invalidRecordTypeMessage](#)

Get invalid record type message

[hasData](#)

Check if component has data to display

[hasScheduledTasks](#)

Check if any tasks are actually scheduled (not just placeholder attempts)

[progressPercent](#)

Get progress percentage (0-100)

[progressBarStyle](#)

Get progress bar width style Fills to each completed node's position Nodes are at: 0%, 25%, 50%, 75%, 100%

[sendEmailButtonLabel](#)

Get send email button label

[progressStatusText](#)

Get progress status text

[progressNodesClass](#)

CSS class for progress bar fill based on completion

[showProgressLine](#)

Show progress line when there are completed attempts and current attempt

[pendingEmailTemplateLabel](#)

Template label hint for the pending email prompt (desktop)

[canSendEmail](#)

Check if email sending is available (all validation passed)

[hasEmailWarning](#)

Check if there are email warnings to display

[emailWarningMessage](#)

Get email warning message

[attemptsWithProps](#)

Get attempts with computed properties for template PERFORMANCE: Memoized to prevent unnecessary recalculations

[contactEstablished](#)

Get contact established boolean from radio value

Functions

[validateForm\(\)](#)

Enhanced form validation PERFORMANCE: Validates form data before API calls

[wiredCadence\(\)](#)

Wire adapter to fetch contact cadence data

[getCardClass\(\)](#)

Get CSS class for attempt card ENHANCED: Differentiates between successful and unsuccessful contact attempts

[getProgressNodeClass\(\)](#)

Get CSS class for progress bar node

[handleEdit\(\)](#)

Handle Edit button click PERFORMANCE: Uses centralized state management

[handleCancel\(\)](#)

Handle Cancel button click PERFORMANCE: Uses centralized state management

[handleContactMadeChange\(\)](#)

Handle radio button change PERFORMANCE: Uses centralized state management

[handleNotesChange\(\)](#)

Handle notes textarea change PERFORMANCE: Uses centralized state management

[toggleCollapse\(\)](#)

Toggle collapsible state PERFORMANCE: Uses centralized state management

[formatRemaining\(\)](#)

Utility: format remaining ms to a compact string (e.g., "12d 4h")

[connectedCallback\(\)](#)

Handle component initialization and data loading Countdowns are calculated on-demand when data changes, not with timers

[disconnectedCallback\(\)](#)

Clean up any async handles if component is destroyed

[handleSaveOutcome\(\)](#)

Handle Save Outcome button click ENHANCED: Includes comprehensive error handling and performance optimizations FIX: Properly advances to next attempt after save

[showToastWithEmailOption\(\)](#)

Show toast with option to send follow-up email

[handleSendEmail\(\)](#)

Handle Send Email button click Includes double-click prevention and email validation

[handleSkipEmail\(\)](#)

Handle Skip Email button click This is the ONLY way to dismiss the email prompt (keeps it visible if agent closes composer)

[openListEmailDialog\(\)](#)

Open Send List Email dialog with appropriate template based on attempt number

FIX: Uses direct URL navigation to email composer This avoids the "Invalid template returned by render()" error

NOTE: This handles both Person Accounts and Business Accounts with Contacts.

- Person Account: Opens email composer for Account
- Business Account: Opens email composer for Contact

[showToast\(\)](#)

Show toast notification

showInvalidRecordType

Check if record type is invalid

Kind: global variable

invalidRecordTypeMessage

Get invalid record type message

Kind: global variable

hasData

Check if component has data to display

Kind: global variable

hasScheduledTasks

Check if any tasks are actually scheduled (not just placeholder attempts)

Kind: global variable

progressPercent

Get progress percentage (0-100)

Kind: global variable

progressBarStyle

Get progress bar width style Fills to each completed node's position Nodes are at: 0%, 25%, 50%, 75%, 100%

Kind: global variable

sendEmailButtonLabel

Get send email button label

Kind: global variable

progressStatusText

Get progress status text

Kind: global variable

progressNodesClass

CSS class for progress bar fill based on completion

Kind: global variable

showProgressLine

Show progress line when there are completed attempts and current attempt

Kind: global variable

pendingEmailTemplateLabel

Template label hint for the pending email prompt (desktop)

Kind: global variable

canSendEmail

Check if email sending is available (all validation passed)

Kind: global variable

hasEmailWarning

Check if there are email warnings to display

Kind: global variable

emailWarningMessage

Get email warning message

Kind: global variable

attemptsWithProps

Get attempts with computed properties for template PERFORMANCE: Memoized to prevent unnecessary recalculations

Kind: global variable

contactEstablished

Get contact established boolean from radio value

Kind: global variable

validateForm()

Enhanced form validation PERFORMANCE: Validates form data before API calls

Kind: global function

wiredCadence()

Wire adapter to fetch contact cadence data

Kind: global function

getCardClass()

Get CSS class for attempt card ENHANCED: Differentiates between successful and unsuccessful contact attempts

Kind: global function

getProgressNodeClass()

Get CSS class for progress bar node

Kind: global function

handleEdit()

Handle Edit button click PERFORMANCE: Uses centralized state management

Kind: global function

handleCancel()

Handle Cancel button click PERFORMANCE: Uses centralized state management

Kind: global function

handleContactMadeChange()

Handle radio button change PERFORMANCE: Uses centralized state management

Kind: global function

handleNotesChange()

Handle notes textarea change PERFORMANCE: Uses centralized state management

Kind: global function

toggleCollapse()

Toggle collapsible state PERFORMANCE: Uses centralized state management

Kind: global function

formatRemaining()

Utility: format remaining ms to a compact string (e.g., "12d 4h")

Kind: global function

connectedCallback()

Handle component initialization and data loading Countdowns are calculated on-demand when data changes, not with timers

Kind: global function

disconnectedCallback()

Clean up any async handles if component is destroyed

Kind: global function

handleSaveOutcome()

Handle Save Outcome button click ENHANCED: Includes comprehensive error handling and performance optimizations FIX: Properly advances to next attempt after save

Kind: global function

showToastWithEmailOption()

Show toast with option to send follow-up email

Kind: global function

handleSendEmail()

Handle Send Email button click Includes double-click prevention and email validation

Kind: global function

handleSkipEmail()

Handle Skip Email button click This is the ONLY way to dismiss the email prompt (keeps it visible if agent closes composer)

Kind: global function

openListEmailDialog()

Open Send List Email dialog with appropriate template based on attempt number

FIX: Uses direct URL navigation to email composer This avoids the "Invalid template returned by render()" error

NOTE: This handles both Person Accounts and Business Accounts with Contacts.

- Person Account: Opens email composer for Account
- Business Account: Opens email composer for Contact

Kind: global function

showToast()

Show toast notification

Kind: global function
