

Schema

Fields

Name	Label	Type	Description
Contact_Attempt_Number__c	Contact Attempt Number	Number	BRD Contact Cadence: Which contact attempt this task represents (1-5). Maps to BRD Day 0, 5, 35, 65, 95 cadence. Used by Flow to determine next steps and populate Case.Contact_Attempt_Count__c upon completion.
Succession_Contact_Established__c	Succession Contact Established	Checkbox	BRD Phase 1-2: Agent marks this checkbox when verbal contact is successfully made during this specific task attempt. Used by Flow to determine whether to create next attempt task or stop cadence. If checked, Flow updates Case.Contact_Established__c and stops scheduling future attempts.

Related Flows

Object	Name	Type	Description
Case	Case_Create_Initial_Contact_Attempt	Record After Save	Seeds Attempt 1 (Day 0) when Verification_Status__c becomes "Complete - Verified" on an Estate Administration case. Guards against duplicates via Contact_Attempt_Count__c IS NULL. Triggers on create or when the

			verification field changes. Adds Builder UI metadata for clarity.
Task	Task_Create_Next_Contact_Attempt	Record After Save	Creates the next contact attempt when the current attempt Task is completed. Schedules ActivityDate off Case.CreatedDate (Day 5/35/65/95). Exits when contact established or after Attempt 5. Includes fault connector for parent case lookup.
Task	Task_Succession_Contact_Update	Record After Save	Sets Case.Contact_Established__c when a Task is completed with Succession_Contact_Established__c = TRUE. Acts as circuit breaker to stop the cadence. Includes fault connector for parent case lookup.
